Choice Based Credit System (CBCS)
Name of the Programme (UG): B.E

Syllabus for III - Semester and IV - Semester

With effect from 2017 - 2018

Specialization /Branch: Mechanical Engineering

Chaitanya Bharathi Institute of Technology (A)
Chaitanya Bharathi (P.O), Gandipet
Hyderabad-500075, Telangana State.

CHAITANYA BHARATHI INSTITUTE OF TECHNOLOGY(A)
Choice Based Credit System
B.E (Mechanical Engineering)

CIE - Continuous Internal Evaluation   SEE - Semester End amination

AssessmentProcedures for Awarding Marks

The distribution of marks is based on CIE by concerned teacher and the Semester end examination shall be as follows:

Course (in terms of credits)	CIE	Semester end Examination(Marks)	Remarks	Duration of SemesterEnd Examination
Three(3) Credits/ Four(4) Credits	30*	70**	Theory Course/ Engg.Graphics	3 Hours
Two(2) Credits	20*	50***	Theory	2 Hours
Two(2) Credits	25	50	Lab Course/ Workshop	3 Hours
One(1) Credit	15	35	Lab Course	2 Hours
Two(2) Credits	50	—-	Project Seminar/ Seminar	——
Six(6) Credits	50	100	Project	Viva
One(1) Credit	—-	50***	Environmental Studies,Profess-ional Ethics and Human values	2 Hours
One(1) Credit	50		Mini Project	——-

CIE: Continuous Internal Evaluation

*Out of 30/20 sessional marks(CIE), 10/5 marks are allotted for slip-tests (Three slips test will be conducted, each of 10/5 marks, best two average is considered) and the remaining 20/15 marks are based on the average of two tests, weightage for each test is 20/15 marks.

**The question paper will be in two parts, Part-A and Part-B. Part A is for Ten(10) questions and is compulsory, covers the entire syllabus, and carries 20 marks. Part-B carries 50 marks and covers all the units of the syllabus (student has to answer five out of seven questions).

***The question paper will be in two parts, Part-A and Part-B. Part A is for Ten(10) questions and is compulsory, covers the entire syllabus, and carries 15 marks. Part-B carries 35 marks and covers all the units of the syllabus (student has to answer five out of seven questions).

Note: A course that has CIE (sessional marks) but no semester end examination as per scheme, is treated as Pass/Fail for which pass marks are 50% of CIE.

A candidate has earned the credits of a particular course, if he/she secures not less than the minimum marks/grade as prescribed. Minimum pass marks for theory course is 40% of total marks i.e., CIE plus semester end examinations where as for the lab course/project is 50%.

16MT C05

ENGINEERING MATHEMATICS-III

Instruction	3 Hours per week
Duration of End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	3

Course objectives:
1. To study the expansion of functions in various intervals.
2. To form P.D.E and to find its solution.
3. To solve Wave, Heat & Laplace equations.
4. To learn Differentiation and Integration of complex valued functions.
5. To evaluate Complex Integration.
6. To evaluate Real definite integrals.

Course outcomes: On successful completion of this course the student will be able to
1. Expand functions in the given intervals.
2. Solve linear and non linear PDEs.
3. Solve one-dimension, two-dimension, Heat steady state equations and also one-dimension wave equation.
4. Solve problems on Analytic functions, Cauchy's theorem and Cauchy's integral formula.
5. Expand functions by using Taylor's and Laurent's series.
6. Solve Real and Complex integrals by using Cauchy Theorems.

UNIT – I
Fourier series: Definition of Periodic, Single valued, finite maxima and minima of functions. Euler's Formulae, Dirichlets Conditions for Fourier expansion, Functions having points of discontinuity, Change of interval, Expansion of odd and even functions, Half-range sine series and cosine series.

UNIT-II:
Partial differential equations: Formation of partial differential equations by eliminating the arbitrary constants or arbitrary functions, solutions of linear partial differential equation of first order by using Lagrange's Method, solution of Non-linear partial differential equations of first order by using standard types, Charpit's Method.

UNIT - III

Applications of Partial differential equations: Solution of partial differential equations by using method of separation of variables, solution of vibration of a stretched string (1D-Wave equation), one dimensional heat equation, Two dimensional heat equation under steady state conditions.

UNIT - IV

Theory of Complex variables: Analytic functions, Cauchy Riemann equations (Cartesian and polar forms), construction of Analytic functions by using Milne-Thomson's method. Harmonic function. Complex line integrals, Cauchy's theorem, Cauchy's Integral formula and its derivatives and problems related to the above theorems.

UNIT - V

Expansion of functions, Singularities & Residues: Taylor's and Laurent's series Expansions (Only statements). Zeros, types of singularities, Residues and Cauchy's Residue theorem, Evaluation of real integrals by Cauchy's residue theorem. Evaluation of improper real integrals of the type: $\int_{-\infty}^{\infty} f(x)dx$ Where f(x) has no poles on real axis and $\int_{0}^{2\pi} f(\sin\theta, \cos\theta)d\theta$.

Text Books:
1. B.S. Grewal, Higher Engineering Mathematics, 43rd Edition, Khanna Publishers, 2015.
2. M.D. Raisinghania, Advanced Differential equations, 7th edition, S Chand publishers, 2013.
3. J. W. Brown and R. V. Churchill, Complex Variables and Applications, 7th Edition, McGraw Hill publishers, 2003.

Suggested Reading:
1. N P Bali and Manish Goyal, A Text Book of Engineering Mathematics, 9th Edition, Laxmi publishers, 2016.
2. Alan Jeffrey, Mathematics for Engineers and Scientists, 6th Edition, Chapman & Hall/CRC publishers, 2013.
3. A R Vasistha and R K Gupta, Integral transforms, Krishna prakashan publishers, 2004.
4. R.K.Jain & S.R.K.Iyenger, Advanced Engineering Mathematics, 3rd Edition, Narosa Publications, 2007.

16ME C04

MATERIAL SCIENCE AND METALLURGY

Instruction	3 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	3

Course Objectives: Student will
1. Enable to understand structure property relations, analyze the failures of metals and their prevention.
2. To broad understanding of phase diagrams.
3. Acquire basic knowledge in various heat treatment operations, their purpose and applications.
4. Expose to various methods of extractive metallurgy techniques.
5. Understand various modes of failure and suggest mechanisms for preventions of failures.
6. Understand applications of conventional metals and alloys.

Course Outcomes: On successful completion of this course the student will be able to
1. Know the fundamental science and engineering principles relevant to material.
2. Suggest appropriate physical metallurgical methods (phase diagrams).
3. The type of heat treatment operation to be given to any metal in order to improve desired Mechanical properties.
4. Basic ability to plan an extraction process for given ore.
5. Suggest the appropriate methods for prevention of failures.
6. Analyze the applications of conventional metals and alloys.

UNIT–I
Imperfections in crystals, dislocation in crystals, types of dislocations, effect of slip and twinning on the plastic deformation, cold and hot working, strain hardening and Bauchinger effect, recovery, recrystallization, grain growth and its effect.
on mechanical properties of metals.
Fracture: Types of fracture in metals, modes of fracture, Griffith theory of brittle fracture, crack propagation, ductile fracture, fracture under combined stress.

UNIT–II
Fatigue: S–N curve, Structure of fatigue fracture specimen. Fatigue crack propagation, effect of metallurgical variables on fatigue of metal, low cycle fatigue, experimental determination of fatigue strength (RR–Moore Test).

Creep: Creep strength, creep curve, creep deformation mechanisms, creep test.

Diffusion: Fick's law of diffusion, application of diffusion theory in mechanical engineering.

UNIT–III

Structure of Alloys: study of eutectic, eutectoid, peritectic and peritectoid reactions, Iron–Iron Carbide equilibrium diagram, construction and interpretation.

Types of plain carbon steels, cast irons and their properties and characteristics.

UNIT–IV

Heat Treatment: Annealing, normalising, hardening, tempering, Construction and interpretation of T–T–T diagram, austempering and martempering, case hardening, carburizing, nitriding, carbo–nitriding, flame hardening, induction hardening.

UNIT–V

Introduction to Extractive Metallurgy: Method of production of pig iron by blast furnace, cast iron by cupola furnace, Method of production of steel by Bessemer convertor, L.D process and electric arc process.

Alloy Steels: Effects of alloying elements like nickel, chromium, manganese, silicon tungsten, and titanium, Study about stainless steels, HSS, brass, bronze; their composition and properties.

Text Books:
1. V. Raghavan, Materials Science and Engineering, Prentice Hall of India Ltd., 4th Edn. ,2005.
2. S.H. Avner, Introduction to Physical Metallurgy, Tata McGraw Hill Publishers, 2nd Edn., 2005.

Suggested Reading:
1. S.P. Nayak, Engineering Metallurgy and Material Science, Charoter Publishing House, 6th Edn., 2005.
2. E. Dieter, Mechanical Metallurgy, Metric Edition, Tata McGraw Hill, 3rd Edn, 2005.
3. K.L. Kakani, Material Science, New Age Publications (P) Ltd., 2008.

16ME C05

MECHANICS OF MATERIALS

Instruction	3L+1T Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	4

Pre-Requisites: Engineering Mathematics, Engineering Mechanics.

Course Objectives:

1. Student is exposed to the concept of different types of loads, stresses, strains and analysis of members for axial loads.
2. Student will acquire knowledge in drawing bending and shear force diagrams of beams for various loads.
3. Student becomes familiar with methods of evaluation of deflection of beams of various configurations and stresses that arise due to simple bending.
4. Student is exposed to the concept of principal stresses and phenomenon of torsion.
5. Student will acquire knowledge in estimating stresses for thin and thick cylindrical shells.
6. Student will acquire knowledge in estimating crippling load in buckling for various columns and struts.

Course Outcomes:

Students who successfully complete this course will have demonstrated ability to:

1. Classify the materials, stresses, strains and understand engineering constants, poisons ratio along with relation between them. Also analyze axially loaded members.
2. Draw shear force, bending moment diagrams for different types of beams and calculate stresses and strains due to simple bending.
3. Determine slope and deflection for various configurations of beams using different methods and stress, strain and deflection due to torsion of circular members.
4. Analyze shear stress distribution in different sections of beams.
5. Understand compound stresses, calculation of principal stresses analytically and graphically using Mohr's circle.

6. Estimate stresses in thin and thick cylinders. Also estimate critical load in buckling for various columns and struts.

UNIT–I

Stresses and Strains: Definitions, types of stresses and strains, elasticity and plasticity. Hooke's law, stress-strain diagrams for engineering materials, modulus of elasticity. Poisson's ratio, relationship between elastic constants, linear and volumetric strains, bars of uniform strength, temperature stresses, compound bars.

UNIT–II

Beams: Definition of bending moment and shear force; relationship between intensity of loading, shear force and bending moment; bending moment and shear force diagrams for cantilever, simply supported and overhanging beams; simple theory of bending, moment of resistance, modulus of section.

UNIT–III

Slopes and Deflections: Slope and deflection measurements of cantilever, simply supported beams with Macaulay's and double integration methods subjected to point loads and uniformly distributed loads.

Torsion: Derivation of torsion formula for circular sections, torsional stresses, angle of twist, power transmission, effect of combined bending and torsion.

UNIT–IV

Shear Stresses in beams: Distribution of shear stresses in rectangular, I-section and T-section for solid and hollow sections.

Compound stresses, principal stresses and strains. Mohr's circle of stress.

UNIT–V

Cylinders: Stresses in thin and thick cylinders with internal and external pressures. Hoop and longitudinal stresses in cylinders, stresses in compound cylinders.

Columns and struts: Euler's and Rankine's formulae for axial load applications. Secant and Perry formulae for eccentrically loaded columns.

Text Books:

1. S.S.Rattan, "Strength of materials", Tata Mc-Graw Hill, 3rd Edition, 2016.
2. S. Ramamrutham, "Strength of Materials", Dhanpatrai and Sons, 1993.
3. G.H.Ryder, "Strength of materials", 3rd Edition in SI Units, Macmillan India Limited, Delhi 2002.

Suggested Reading:

1. S.S. Bhavakatti, Strength of Materials, Vikas Publication, 2003.
2. B.C. Punmia, Strength of Materials and Theory of Structures, Laxmi Pub., 1992.
3. G.H. Ryder, Strength of Materials, Third Edition in SI units, Macmillan India Limited, Delhi, 2002

16ME C06

FLUID DYNAMICS

Instruction	3 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	3

Course Objectives: Student will understand
1. The fluid properties and different fluids.
2. The centre of pressure and stability conditions.
3. The importance of stream function and velocity potential function.
4. The equations related to Fluid dynamics.
5. Different types of fluid flows.
6. Major and minor losses of fluid flows.

Course Outcome: On successful completion of this course the student will be able to
1. Differentiate different types of fluids.
2. Calculate centre of buoyancy and metacentric height.
3. Differentiate rotational and irrotational flows.
4. Determine forces exerted on fluid body.
5. Differentiate laminar over turbulent flows.
6. Determine various losses incurred in fluid flows.

UNIT–I
Properties of fluids: Definition of fluid and concept of continuum. Difference between ideal and real fluids. Classification of fluids. Fluid properties: Pressure, Density, Specific weight, Specific volume, Dynamic and Kinematic viscosity, Compressibility and Bulk modulus, Surface tension and Capillarity.
Pressure measurement: Fluid pressure at a point, pascal's law, Hydrostatic law, Measurement of pressure by different manometers.

UNIT–II
Fluid Statics: Total pressure, centre of pressure, total pressure and centre of pressure on plane surfaces like horizontal plate, vertical plate, inclined plate and curved surfaces.
Buoyancy and Floatation: Buoyancy, buoyant force, centre of buoyancy, Meta centre, stability for submerged and floating bodies.

UNIT-III
Fluid Kinematics: Classification of fluid flow: steady and unsteady, uniform and non-uniform, laminar and turbulent, rotational and irrotational,

one, two and three dimensional flows, General concepts of path line, stream line and stream tube. Definition and properties of stream function, velocity potential function and use of flow nets.

UNIT–IV
Fluid Dynamics: Energy of fluid body, potential energy and potential head, pressure energy and pressure head, kinetic energy and kinetic head, derivation of Euler's and Bernoulli's equations and their applications like venturi meter, orifice meter, pitot tube, impulse momentum equation and applications. Discharge equations for weirs and notches.

UNIT–V
Laminar and Turbulent flow in pipes: Distinction between laminar and turbulent flows, Reynold's number and its significance, upper and lower critical values of Reynold's number for flow in pipes, development of laminar and turbulent flow in circular pipes. Hagen–Poiseuille equation, frictional losses in pipes, Darcy equation, estimation of Darcy's friction factor, empirical formulae and Moody's chart.

Flow through pipes: Loss of energy in pipes, Major losses, Minor losses, Hydraulic gradient and total energy lines.

Text Books:
1. P.N.Modi and S.M.Seth, Hydraulic and Fluid Mechanics, Standard Book House, 2010.
2. R.K.Rajput, Fluid Mechanics and Hydraulic Machines, S. Chand and Company, 2010.

Suggested Reading:
1. K.L.Kumar, Engineering Fluid Mechanics, Eurasia Publishing House, 2005.
2. V.L.Streeter, Fluid Mechanics, Mc.Graw Hill Co. Ltd., 2005.
3. D.S.Kumar, Fluid Mechanics, S.K. Kataria and Sons, 2010.

16ME C07

MACHINE DRAWING

Instruction	1L+2D Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	2

Pre-Requisites: The student is required to have an idea about Engineering Drawing

Course Objectives: Student will
1. Understand drawing and develop capacity to represent any object with the help of sketch.
2. Study the conventions and rules to be followed by engineers for making accurate drawings.
3. Understand the basic dimensioning practices that have to be followed in the preparation of Drawings.

Course Outcomes:
On successful completion of this course the students will be able to:
1. Draw conventional representation of different materials and mechanical components.
2. Read the working drawings in the machine shop.
3. Draw the orthographic projections and sectional views of machine parts.
4. Draw missing views as well as to analyze and interpret drawings of machine components.
5. Understand the shape and structure of different types of screws, keys, couplings, and rivets.
6. Draw assembly drawings of certain Machine Tools, Engine parts and Valves etc.

1. INTRODUCTION:
Format of drawing sheet, title block, conventions of drawing lines and dimensions, First and third angles projections, conversion of Pictorial view to orthographic views, convention for sectional views. Orthographic projections including sectional views of simple machine elements.

2. DRAWING OF FASTENERS, JOINTS AND COUPLINGS:
Practices of sketching work: Free hand sketches of typical machine elements for simple cases for riveted and screwed fastening, joints, couplings (To indicate proportions).

3. ASSEMBLY DRAWING:

Preparation of assembly drawings from given details, Ability to supply additional views. The exercises will be drawings of typical machine parts like:

1. Bearings-Plummer block(Pedestal bearing),
2. Petrol Engine Connecting rod,
3. Eccentric,
4. Cross head,
5. Stuffing box,
6. Pipe vice,
7. Screw jack,
8. Lathe Tail-stock
9. Single Tool Post,
10. Revolving centre.

Note: The test is for the ability of the student to read and interpret drawings. The drawing should include part list in standard format.

Text Books:

1. N. Siddeshwar, Machine Drawing, Tata McGraw Hill Publishing Co., Ltd., 5th Edition, 2004.
2. N.D. Bhatt, V.M. Panchel, Machine Drawing, Cherotar Publishing house, Anand, New Delhi, 49th Edition, 2014.

Suggested Reading:

1. K.L. Narayan, P. Kanniah, K. Venkat Reddy, Machine Drawing, New Age International (P) Ltd., 2nd Edition, 2009.
2. K.C. John, Text book of Machine Drawing, PHI Learning, 2010.
3. Ajeet Singh, Machine Drawing, Galgotia Publications, 2010.

16MB C01
ENGINEERING ECONOMICS AND ACCOUNTANCY
Instruction	3 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	3

Course Objectives: Students will
1. introduce managerial economics and demonstrate its importance in managerial decision making.
2. develop an understanding of demand and relevance of its forecasting in the business.
3. provide the basics of market structure and the concept of equilibrium in different market structures.
4. examine the economic analysis of production process, types of inputs and to explain different costs and their relationship with the output.
5. understand the importance of project evaluation in achieving a firm's objective.
6. explain the concept of Accountancy and provided knowledge on preparation and analysis of Final accounts.

Course Outcomes: After completion of the course, student will be able to:
1. apply fundamental knowledge of Managerial economics concepts and tools.
2. understand various aspects of demand analysis and forecasting.
3. understand price determination for different markets.
4. study production theory and analyze various costs and benefits involved in it so as to make best use of resources available.
5. analyze different opportunities and come out with best feasible capital investment decisions.
6. apply accountancy concepts and conventions, Final accounts and financial analysis.

UNIT-I:
Introduction to Managerial Economics: Introduction to Economics and its evolution - Managerial Economics - its scope, importance, Its usefulness to engineers - Basic concepts of Managerial economics.
UNIT-II:
Demand Analysis: Demand Analysis - Concept of demand, determinants, Law of demand, its assumptions, Elasticity of demand, price, income and

cross elasticity, Demand Forecasting – Types of Market structures. (Simple numerical problems).

UNIT-III:
Production and Cost Analysis: Theory of Production - Firm and Industry - Production function - input-out relations - laws of returns - internal and external economies of scale. Cost Analysis: Cost concepts - fixed and variable costs - explicit and implicit costs - out of pocket costs and imputed costs - Opportunity cost - Cost output relationship - Break-even analysis. (Theory and problems).

UNIT-IV:
Accountancy: Book-keeping, principles and significance of double entry book keeping, Journal, Subsidiary books, Ledger accounts, Trial Balance concept and preparation of Final Accounts with simple adjustments.

UNIT-V:
Capital Budgeting: Introduction to capital budgeting, Methods: traditional and discounted cash flow methods. Introduction to Working capital management. (Numerical problems).

Text Books:
1. Mehta P.L., Managerial Economics – Analysis, Problems and Cases, Sultan Chand and Son's Educational publishers, 2013.
2. Maheswari S.N., Introduction to Accountancy, Vikas Publishing House, 2013.
3. Panday I.M., Financial Management, Vikas Publishing House, 11th edition, 2015.

Suggested Reading:
1. Varshney and KL Maheswari, Managerial Economics, Sultan Chand, 2014.
2. M.Kasi Reddy and S.Saraswathi, Managerial Economics and Financial Accounting, Prentice Hall of India Pvt Ltd, 2007.
3. A.R.Aryasri, Managerial Economics and Financial Analysis, McGraw-Hill, 2013.

16ME C08
MATERIAL SCIENCE AND METALLURGY LAB

Instruction	3 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	50 Marks
CIE	25 Marks
Credits	3

Course Objectives: Students will
1. Acquire basic knowledge by understanding iron-carbide diagram and its application in engineering.
2. Expose to Metallographic study and analysis of various metals.
3. Acquire knowledge in determining the hardness of metals before and after various Heattreatment operations.
4. Understand differences between different heat treatment methods.
5. Expose to T-T-T curve and its application in engineering metallurgy.
6. Understand the relation between micro structure and properties.
.
Course Outcomes: On successful completion of this course the students will be able to
1. Identify crystal structure of various metals.
2. Measure hardness and can correlate with microstructure.
3. Perform a suitable heat treatment operation based on desired properties.
4. Underlines the importance of grain size in evaluating the desired mechanical properties.
5. Understand the process of heating and cooling for various heat treatment methods.
6. Correlate the heat treatment methods and the mechanical properties obtained.

List of the Experiments
1. Study of: Metallurgical Microscope, Allotropes of Iron, Iron-Iron carbide diagram, Procedure for specimen preparation.
2. Observations for the following specimens - i) Low carbon steels, ii) Medium carbon steels, iii) Eutectoid steels, iv) High Carbon steels, v)Stainless steels, vi) Case carburized, vii)HSS, viii) White cast iron, ix) Gray cast iron, x) alleable iron, xi)Spheroidal iron, xii) Al–Si alloy and determination of grain size using Image Analyzer.
3. Preparations of the following specimens : i) $\alpha - \beta$ Brass, ii)Normalised steel iii)Medium carbon steel iv)Nodular cast iron v) Grey cast iron.

4. Heat Treatment Processes
    i) Annealing
    ii) Normalizing
    iii) Hardening.

Text Books:
1. V. Raghavan, Materials Science and Engineering, Prentice Hall of India Ltd., 4th Edition. ,2005.
2. S.H. Avner, Introduction to Physical Metallurgy, Tata McGraw Hill Publishers, 2nd Edition., 2005.

Suggested Reading:
1. S.P. Nayak, Engineering Metallurgy and Material Science, Charoter Publishing House, 6th Edition., 2005.
2. E. Dieter, Mechanical Metallurgy, Metric Edition, Tata McGraw Hill, 3rd Edition, 2005.
3. K.L. Kakani, Material Science, New Age Publications (P) Ltd.,2008.

16ME C09

MECHANICS OF MATERIALS LAB

Instruction	3 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	50 Marks
CIE	25 Marks
Credits	3

Course Objectives:

1. To apply mechanics of materials theory on real specimens and learn the practical testing procedures and concepts.

2. Demonstrate an understanding of tension, and the relationship between stress, strain and application of Hooke's law.

3. Demonstrate an understanding of types of beams, deflections and measurement of material property through deflections.

4. Demonstrate an understanding of torsion and deformations resulting from torsion.

5. To demonstrate the understanding of hardness and its measurement using different scales like Brinnel and Rockwell.

6. To demonstrate an understanding of measurement of shear modulus and young's modulus for machine members like helical and leaf springs through loading respectively.

Course Outcomes: Students who successfully complete this course will have demonstrated ability to:

1. Draw stress-strain curve for an isotropic material and understand the salient features of it.

2. Demonstrate in determining the Young's modulus of various beam materials by conducting load-deflection test.

3. Evaluate rigidity modulus of a given shaft specimen by torsion test.

4. Able to find out Young's modulus and shear modulus for mechanical components like leaf spring and closely coiled helical spring through load-deflection test respectively.

5. Evaluate hardness of different materials using different scales and also estimate the impact resistance of a material by conducting impact tests.

6. Find the compressive and crushing strengths of concrete cubes and bricks.

List of Experiments

1. Uni-axial tension test using UTM.
2. Brinnel's and Rockwell's hardness tests.
3. Deflection test on propped cantilever.
4. Deflection test on a helical spring to determine the rigidity modulus.
5. Torsion of shaft to determine the rigidity modulus of shaft material.
6. Defection test on a cantilever beam to determine the Young's modulus.
7. Deflection test on a simply supported beam to determine the Young's modulus.
8. Deflection test on continuous beam to determine the Young's modulus.
9. Load-deflection test on a leaf spring to find out the young's modulus of leaf material.
10. Crushing and compression test on bricks and concrete cubes.

Text Books:

1. S.S.Rattan, Strength of materials, Tata Mc-Graw Hill, 3rd Edition, 2016.
2. S. Ramamrutham, Strength of Materials, Dhanpatrai and Sons, 1993.
3. G.H.Ryder, Strength of Materials, 3rd Edition in SI Units, Macmillan India Limited, Delhi 2002.

Suggested Reading:

1. S.S. Bhavakatti, Strength of Materials, Vikas Publication, 2003.
2. B.C. Punmia, Strength of Materials and Theory of Structures, Laxmi Pub., 1992.
3. G.H. Ryder, Strength of Materials, Third Edition in SI units, Macmillan India Limited, Delhi, 2002.

16ME C10

COMPUTER DRAFTING LAB

Instruction	3 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	50 Marks
CIE	25 Marks
Credits	2

Course Objectives: Students will
1. Acquire knowledge in 2D drafting tools.
2. Acquire knowledge in graphic communication.
3. Expose to design methodologies.
4. Acquire knowledge in concept of layers.

Course Outcomes: On successful completion of this course the students will be able to
1. Demonstrates Graphics and design competencies.
2. Apply CAD techniques for 2D modeling.
3. Develops an ability to think 3D and interpret data from blue prints and sketches, layers concepts.
4. Apply and draw orthographic projections with the knowledge of correct graphics communication (drawings).
5. Draw 2D drawings and sectional views of part models.
6. Draw 2D drawings and sectional views of assembly models.

Application Software Tool: Auto CAD / Solid Works

1. **INTRODUCTION TO SOLIDWORKS DRG EDITOR/ AUTOCAD** :
   XY Coordinate system, Angular measurement, Setting of Units, Limits, Absolute, Relative and Polar Coordinates, zoom, Text, Multiline Text, Creating Title Block – Title, Drawing Number, Drawn, Checked, Approved, Angle of Projection, Scale, Basic Toolbars and commands - Format, View, Draw, Dimension, Modify Tool bars, Draw tool bar options - line, Circle, Rectangle, Ellipse, Spline and Arc , Modify tool bar options- Trim, Extend, Offset, Fillet, Chamfer, Mirror, Break, Array, Polar, Rectangular, Move, Copy, Stretch, Rotate ESNAP, SNAP, Grid, Ortho, Dimension Tool bar –aligned, angular, linear and annotations, leader line. Setting Dimension Style. View Tool bar - Orbit, Render, 3D Views (SW, SE, NE, NW Isometric Views).

2. **EXERCISES FOR PRACTICE:**
   Square headed spanner, circular, rectangular components, concentric squares, circle inscribed in a square and rectangle. Fork, Depth Stop, Pump Housing, Geneva Wheel. Importance of Layer - Layer and object properties; construction line, object line, hidden line, centre line, hatching, dimensioning, leader, Options like - Region, Extrude.

3. **EXERCISES FOR PRACTICE:**
   2D drawings and sectional views - Shaft support, Sliding Block, Bearing Bracket, Shaft bracket, Anchor bracket, Piston of Petrol Engine, Petrol Engine Connecting Rod.

4. **EXERCISES FOR PRACTICE**:
   2D drawings of Components of Screw Jack, Components of Plummer Block.

Text Books:
   1. Machine Drawing, K L Narayana, Kannaiah & Venkat Reddy.
   2. Solidworks Drawing and Training Manual.
   3. Autocad Command Reference manual.

CIE - Continuous Internal Evaluation SEE - Semester End Examination

AssessmentProcedures for Awarding Marks

The distribution of marks is based on CIE by concerned teacher and the Semester end examination shall be as follows:

Course (in terms of credits)	CIE	Semester end Examination(Marks)	Remarks	Duration of SemesterEnd Examination
Three(3) Credits/ Four(4) Credits	30*	70**	Theory Course/ Engg.Graphics	3 Hours
Two(2) Credits	20*	50***	Theory	2 Hours
Two(2) Credits	25	50	Lab Course/ Workshop	3 Hours
One(1) Credit	15	35	Lab Course	2 Hours
Two(2) Credits	50	—-	Project Seminar/ Seminar	——
Six(6) Credits	50	100	Project	Viva
One(1) Credit	—-	50***	Environmental Studies,Profess-ional Ethics and Human values	2 Hours
One(1) Credit	50		Mini Project	——-

CIE: Continuous Internal Evaluation

*Out of 30/20 sessional marks(CIE), 10/5 marks are allotted for slip-tests (Three slips test will be conducted, each of 10/5 marks, best two average is considered) and the remaining 20/15 marks are based on the average of two tests, weightage for each test is 20/15 marks.

**The question paper will be in two parts, Part-A and Part-B. Part A is for Ten(10) questions and is compulsory, covers the entire syllabus, and carries 20 marks. Part-B carries 50 marks and covers all the units of the syllabus (student has to answer five out of seven questions).

***The question paper will be in two parts, Part-A and Part-B. Part A is for Ten(10) questions and is compulsory, covers the entire syllabus, and carries 15 marks. Part-B carries 35 marks and covers all the units of the syllabus (student has to answer five out of seven questions).

Note: A course that has CIE (sessional marks) but no semester end examination as per scheme, is treated as Pass/Fail for which pass marks are 50% of CIE.

A candidate has earned the credits of a particular course, if he/she secures not less than the minimum marks/grade as prescribed. Minimum pass marks for theory course is 40% of total marks i.e., CIE plus semester end examinations where as for the lab course/project is 50%.

16ME C14

KINEMATICS OF MACHINES

Instruction	3L+1T Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	4

Course Objectives: Student will acquire knowledge in
1. Analysis of mechanisms.
2. Drawing displacement diagrams for followers with various types of motions.
3. Cam profile drawing for various followers.
4. Estimation of transmission of power by belts and application of various gears and gear trains.

Course Outcomes: Student will demonstrate knowledge in
1. Understanding basic elements of machinery and their motion characteristics.
2. Designing a suitable mechanism depending on application.
3. Drawing displacement diagrams and cam profile diagram for followers executing different types of motions and various configurations of followers.
4. Drawing velocity and acceleration diagrams for different mechanisms.
5. Selecting gear and gear train depending on application.
6. Selection of suitable clutch, brake.

UNIT–I
Introduction: Definition of link, element, pair, kinematic chain, mechanism and machine, Grubler's criterion, single and double slider chains, inversions of quadratic chain, inversions of single and double slider crank chains. Mechanism with lower pairs and straight line motion mechanism, Pantograph and Geneva mechanisms. Ackerman and Davis steering gear mechanisms and Hooke's Joint. Peaucellier, Hart, Scott-Russel, Watt and Tchebicheff mechanisms.

UNIT–II
Analysis of mechanisms: Graphical methods to find velocities of mechanisms, instantaneous centre, body centre and space centre, Kennedy's theorem, graphical determination of acceleration of different mechanisms including Coriolis component of acceleration, analytical method to find the velocity and acceleration, analysis of four bar mechanism with turning pairs, Freudenstein's method for synthesis of four bar linkage.

UNIT–III

Laws of Friction: Friction in screw threads, pivots, collars, Clutches - Single and Multi plate, Cone and centrifugal clutches. Friction circle and friction axis of a link.

Brakes and Dynamometers: Block or shoe, band and block, internal expanding shoe brake, Prony, rope brake, belt transmission, torsion dynamometers.

UNIT–IV

Cams: Types of cams and followers, displacement diagrams for followers, uniform motion, parabolic motion, simple harmonic motion, cycloidal motion, drawing cam profile with knife edge follower, translating roller follower and translating flat follower. Cams of specified contours, tangent cam with roller follower, circular arc (convex) cam with roller follower.

UNIT–V

Gears: Classification of gears, spur gears, nomenclature, law of gear tooth action, involute as gear tooth profile, interference of involute gears, minimum number of teeth to avoid interference, contact ratio, cycloidal tooth profile, comparison of involute and cycliodal tooth profile.

Helical Gears: Helical gear tooth relations, contact of helical gear teeth, **Gear trains**: Gear trains–simple and compound, reverted and epicyclic gear trains. Differential of an Automobile.

3. J.E.Shigley, Theory of Machines, Tata Mc.Graw Hill Publishers, New Delhi, 3rd Edition, 2005.

Suggested Reading:
1. C.S. Sharma and Kamlesh Purohit, Theory of Mechanisms and Machines PHI Learning Pvt. Limited, 2006.
2. Amitabh Ghosh and A.K.Mallik, Theory of Machines, East West Publications, 3rd Edition, 2009.

16ME C15

THERMODYNAMICS

Instruction	4 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	4

Course Objectives: Student will understand
1. Basic definitions of thermodynamics and significance of Zeroth law of thermodynamics.
2. The importance and application of first law of thermodynamics.
3. The various laws associated with second law of thermodynamics.
4. Properties of pure substances and use of Molier diagram.
5. Various air standard cycles, their importance and their comparison.
6. Calculation procedures of the air-fuel ratio.

Course Outcomes: On successful completion of this course the students will be able to
1. Estimate the temperature of different scales of thermometers.
2. Apply the first law of thermodynamics process to various thermodynamics processes.
3. Understand the meaning of perpetual motion of machine of second kind and its significance.
4. Read data from the chart of Mollier diagram and its applications.
5. Distinguish working principles of various IC engines like diesel engine, petrol engine.
6. Calculate theoretical air–fuel ratios required for combustion of fuels and also convert from gravimetric analysis to volumetric analysis and vice versa.

UNIT–I
Introduction: Thermodynamics, Macroscopic and Microscopic approaches, thermodynamic systems, properties, processes and cycles, thermodynamic equilibrium, quasi – static process, measurement of pressure, Zeroth law of thermodynamics and its significance, measurement of temperature, reference points, ideal gas equation.

UNIT–II
First Law of Thermodynamics: Concept of heat and work, first law of thermodynamics for closed system, energy- a property of the system, application of first law to various thermodynamic processes like isobaric, isochoric, isothermal, adiabatic and polytropic, definition of enthalpy,

PMM1, first law applied to flow processes, application of SFEE to nozzle and diffuser, throttling device, turbine and compressor.

UNIT–III
Second Law of Thermodynamics: Limitations of first law of thermodynamics, Kelvin–Planck and Clausius statements of second law of thermodynamics, PMM2, equivalence of Kelvin-Planck and Clausius statement, reversible and irreversible processes, Carnot theorem, Clausius inequality, calculation of entropy change during various thermodynamic processes, principle of entropy increase, T–S diagrams, application of entropy principle for mixing of two fluids. Helmholtz and Gibb's functions.

UNIT–IV
Thermodynamic Properties of Fluids: Properties of pure substances, p–v diagram, p–T diagram, p–v–T surface, T–s diagram, h–s diagram, dryness fraction, use of steam tables, Maxwell relations.

UNIT–V
Air Standard Cycles: Air standard cycles - Otto, Diesel, Dual Combustion Cycles, working principle, derivation of expression for air standard efficiency, comparison of otto, diesel and dual cycles-for the same compression ratio, for the same maximum pressure and temperature.
Vapour Power Cycles: Vapour power cycles - Carnot cycle, Simple Rankine cycle.
Fuels and Combustion: Characteristics of an ideal fuel, classification of fuels, Stoichiometric air-fuel ratio, equivalence ratio, relation between volumetric and gravimetric analysis.

Suggested Reading:
1. R.K. Rajput, Thermal Engineering, Laxmi Publications (P) Ltd, 8th edition, 2011.
2. Mahesh M Rathor, Thermal Engineering, Tata McGraw Hill Publishers, 2013.

16ME C16

HYDRAULIC MACHINERY AND SYSTEMS

Instruction	4 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	4

Objectives: Students will
1. Learn laws related to Fluid Machinery.
2. Demonstrate his/her knowledge of principles and problems associated with reciprocating pumps.
3. Understand various principles related to rotary pumps.
4. Come to know the working principles of Hydraulic turbines.
5. Learn the performance characters and selection of turbines.
6. Understand the fundamental principles of hydraulic systems.

Outcomes: On successful completion of this course the students will be able to
1. Apply the various fluid laws to different hydraulic machines.
2. Understand the methodology of selection of reciprocating pumps.
3. Acquire the knowledge the functionality of rotary pumps.
4. Understand the selection procedure and estimate the power developed by various hydraulic turbines.
5. Compare the performance of hydraulic turbines and pumps based on characteristics curves.
6. Acquire knowledge the functionality of various hydraulic systems.

UNIT-I

Hydraulic Machines: Classification- Impulse-momentum equation- Layout of hydraulic power plant- working principle- Impact of jet on vanes- Force exerted by a jet striking   (i) a fixed flat vertical vane held normal to the jet flow (ii) at the centre of a fixed symmetrical curved vane (iii) at one end of fixed symmetrical and unsymmetrical curved vanes (iv) flat vertical vane moving in the direction of jet (v) a series of flat vertical moving vanes (vi) at the centre of symmetrical moving curved vanes (vii) symmetrical curved vanes moving in the same direction as that of jet at inlet (viii) at one end of a series of un-symmetrical moving curved vanes.

UNIT-II

Reciprocating Pumps: Classification- working principle- single and double acting pumps- discharge, work done and power required to drive the pumps- slip, % slip and negative slip- Variation of pressure head in the suction and delivery pipes due to acceleration of piston- Variation of

pressure head due to friction in the suction and delivery pipes- Indicator diagrams- Ideal and actual diagrams- Effect of piston acceleration and pipe friction on indicator diagram- Maximum speed at which the pump must run to avoid separation during suction and delivery strokes- Air vessels- Function of air vessels- Work saved by fitting air vessels to single and double acting pumps- Discharge of liquid into and out of air vessels- Performance characteristic curves.

UNIT-III

Centrifugal pumps: Classification- Working principle- Comparison over reciprocating pumps-Velocity triangles- Manometric head- work done per second- Head equivalent of work done- Manometric, mechanical and overall efficiencies- Pressure rise in the impeller- Minimum starting speed- Specific speed- Physical significance of specific speed- Model testing- Conditions of similarity of CF pumps- Priming- Performance characteristic curves.

UNIT-IV

Hydraulic Turbines: Classification- Impulse and reaction turbines- Construction and working of Pelton wheel, Francis turbine and Kaplan turbine- Velocity triangles- Work done (power developed)- Hydraulic, Mechanical and Overall efficiencies- Maximum efficiency- Comparison between Impulse and reaction turbines- Comparison between Francis and Kaplan turbines- Specific speed- Physical significance of specific speed- Unit testing -Unit quantities- Model testing of turbines- Conditions for similarity of turbines- Performance characteristic curves.

UNIT-V

Hydraulic Systems (appliances): Working of hydraulic press- accumulator- intensifier- Ram- jack- lift- direct acting hydraulic lift- Suspended hydraulic lift- crane- air lift pump- gear wheel pump.

16ME C17

MANUFACTURING PROCESSES

Instruction	4 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	4

Course Objectives: to enable the students to
1. Aelect the suitable manufacturing process for a given component.
2. Design pattern, gating system and rises for a simple casting.
3. Identify defect and suggest the remedy for the same.
4. Select suitable welding process for a given requirement.
5. Decide minimum capacity of the machine for a given forming operation.
6. Select suitable forming process for a simple component.

Course Outcomes: Students are able to
1. Select the suitable manufacturing process for a given component.
2. Design pattern, gating system and rises for a simple casting.
3. Identify defect and suggest the remedy for the same.
4. Select suitable welding process for a given requirement.
5. Decide minimum capacity of the machine for a given forming operation.
6. Select suitable forming process for a simple component.

UNIT- I
Pattern design and Methoding: Introduction to casting, classification of casting processes, pattern design: Types of patterns, pattern materials, pattern allowances; Gating system: purpose, elements, requirements, types of gates, choke, gating ratio, types of gating systems, gating system design; Risering: purpose, requirements, chvorinov's rule, optimum shape and dimensions of riser, riser design by Caine's method, Modulus method and NRL method.

UNIT- II
Moulding, Melting, and special casting processes : Moulding sand: ingredients, required properties of moulding sand; Core : purpose, core prints, Melting furnaces: cupola, induction and arc furnace; casting defects and remedies; Special casting processes: Pressure die casting, Centrifugal casting, shell moulding, investment casting, CO_2 moulding.

UNIT- III:

Arc and Resistance Welding Processes: Introduction, Classification of welding processes, Physics of arc, DCSP, DCRP, AC, shielded Metal Arc Welding, Submerged arc welding, Gas Tungsten arc welding, Plasma arc welding, Atomic Hydrogen welding, Resistance welding: spot, projection, seam, butt and percussion welding.

UNIT-IV:

Other Welding processes: Oxy-Acetylene welding, Thermit welding, laser beam welding, Electron beam welding. solid state welding: forge welding, friction welding, ultrasonic welding and explosive welding Soldering and brazing, weld defects and Weldability.

Fundamentals of metal Forming: True stress and true strain, strain hardening, volume constancy applied to disc and slab. Yield criteria. Hot working and Cold working.

UNIT-V:

Metal Forming processes: forging: open die ,closed die and isothermal forging processes, forging equipment, defects; Rolling: process, nomenclature, geometric relationships, rolling mills, defects; Extrusion: types, load calculation assuming ideal deformation, defects; Wire Drawing: Process, analysis considering ideal deformation, defects; shearing: shearing load, energy required, types of shearing processes; Cup Drawing : process, calculation of blank diameter for a given cup, drawing load; sheet bending: process, bend allowance.

4. Mikell P.Grover, Fundamentals of Modern Manufacturing Materials, Processes And Systems, 3rd Edition, Willey A.

16EE C14
ELECTRICAL MACHINES AND MICROCONTROLLER APPLICATIONS

(Common to BE - Mech and Prod)

Instruction	4 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	4

Course Objectives:
1. To understand the concepts of transformers.
2. To comprehend the need of DC and AC machines and their control aspects.
3. To know the features of 3-phase induction motors.
4. To understand the concepts of 8051 microcontrollers.
5. To understand the basics of interfacing with 8051 microcontrollers.

Course Outcomes: The student will be able to
1. Identify the compatibility of DC machines for a given application.
2. Identify the applications of 3-phase induction motor.
3. Know the calculation of Efficiency and regulation of transformer.
4. Program using 8051 microcontrollers.
5. Use 8051 microcontrollers for basic applications.

UNIT- I
D.C. Generators: Constructional details, Principle of operation, EMF equation, Classification of generators, Armature reaction, Characteristics of shunt, series and compound generators.
DC Motors: Working Principle, back EMF, Classification of motors, Torque developed in motors, Characteristics of shunt, series and compound motors, Three point starter, Speed control of DC motors.

UNIT- II
Transformers: Construction, Working principle, EMF equation, Ideal transformer, Practical transformer on no load and load conditions, Equivalent circuit of transformer, Efficiency and regulation of transformer, OC and SC tests.

UNIT-III
Three Phase Induction Motors: Production of rotating magnetic field, construction and principle of operation, Torque Calculation, speed-torque characteristics, Speed control of 3-phase induction motors.

UNIT-IV

8051 Microcontrollers: Introduction to microprocessor, microcontroller classification, Internal architecture of 8051 and its pin configuration, Memory organization and expansion. **SFR's:** Counter and timers, serial data I/O, Interrupts.

8051 Instruction set: Addressing modes and Instruction set. Assembly Language Programming with 8051.

UNIT-V

8051 Interfacing: Expansion of I/O ports, A/D converter, D/A converter, Stepper motor interfacing with 8051, DC motor interfacing with 8051.

Text Books:

1. D.P. Kothari and Nagrath, Basic Electrical Engineering, Tata McGraw Hill Publications, 2nd edition, 2007.
2. V.K.Mehta, Principles of Electrical Engineering, S.Chand and Co, 1st edition, 2003.

4. Ayala K.J., The 8051 Micro Controller Architecture, Programming and Application, Penram International, 2007.

Suggested Reading:

1. B. L.Theraja and A.K. Theraja, A Text book of Electrical Technology, S.Chand and Co., 24th revised Edition, 2007.
2. P. V. Prasad, S. Sivanagaraju, Electrical Engineering: Concepts and Applications, Cengage Learning, 1st Edition, 2012.

16ME C18
HYDRAULIC MACHINERY AND SYSTEMS LAB

Instruction	3 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	50 Marks
CIE	25 Marks
Credits	2

Course Objectives: Students will
1. Determine discharge of fluid flow.
2. Understand how to determine various types of flow using Reynolds apparatus.
3. Verify fluid laws like Bernoulli's equation.
4. Determine losses through pipes.
5. Demonstrate knowledge in evaluating performance characteristics of pumps.
6. Vvaluate the performance characteristics of turbines.

Course Outcomes: On completion of the course, the students will be able to
1. Measure the discharge in pipes.
2. Carry out discharge measurements in open channel.
3. Determine the energy loss in conduits.
4. Calculate forces and work done by a jet on fixed or moving, flat and curved blades.
5. Evaluate the performance characteristics of pumps.
6. Demonstrate the characteristics curves of turbines.

List of experiments:
1. Verification of Bernoulli's equation.
2. Determination of Darcy's friction factor and nature of water flow through pipes.
3. Determination of Cd for V- notch.
4. Determination of Cd for rectangular notch.
5. Determination of Cd for venturimeter.
6. Determination of Cd for Orifice meter.
7. Determination of impact force of jet on fixed flat and fixed curved vanes.
8. Performance and characteristic curves of reciprocating pump.
9. Performance and characteristic curves of centrifugal pump.
10. Performance and characteristic curves of self-priming pump.
11. Performance and characteristic curves of gear pump.
12. Performance and characteristic curves of Pelton wheel.

13. Performance and characteristic curves of Francis Turbine under constant speed and variable speed conditions.
14. Performance and characteristic curves of Kaplan turbine under constant speed and variable speed conditions.

Note: Any 12 experiments need to be conducted.

Text Books:
1. Bansal R.K., A Text Book of Fluid Mechanics and Hydraulic Machines, Laxmi Publication (P). Ltd., New Delhi, 2004.
2. Modi P.N. and Seth S.M., Hydraulics and Fluid Machines, Standard Book House, New Delhi, 2004.

Suggested Reading:
1. Ramamrutham S., Hydraulics, Fluid Mechanics and Fluid Machines, Dhanpat Rai and Sons, New Delhi, 2004.
2. Kumar K.L., Engineering Fluid Mechanics, Eurasia Publishing House (P). Ltd., New Delhi, 2004.

16ME C19

MANUFACTURING PROCESSES LAB

Instruction	3 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	50 Marks
CIE	25 Marks
Credits	2

Course Objectives: to enable the students to
1. prepare the mould for a single piece and split patterns.
2. test the moulding sand and anlalyse the same.
3. test the bead geometry and correlate the results to the input parameters.
4. use TIG, MIG and Spot welding machines and experiment with them.
5. test the formability characteristics of a given sheet metal.
6. demonstrate the of understanding the parts of simple, compound, progressive and combination dies and use them for production of parts.

Course Out comes: Students are able to
1. prepare the mould for a single piece and split patterns.
2. test the moulding sand and anlalyse the same.
3. test the bead geometry and correlate the results to the input parameters.
4. use TIG, MIG and Spot welding machines and experiment with them.
5. test the formability characteristics of a given sheet metal.
6. demonstrate the understanding of the parts of simple, compound, progressive and combination dies and use them for production of parts.

Experiments:
Casting
1. Design and manufacturing of a simple pattern with various allowances.
2. Green sand moulding practice for a single piece pattern.
3. Green sand moulding practice for a split pattern with a horizontal core.
4. Moulding sand testing: GCS, GSS, DCS and DSS Permeability and shatter index.
5. Finding out the GFN, Moisture content and clay content for a given sand sample.
6. Melting and Pouring of Aluminum.
7. Dimensional inspection and visual inspection of the casting and analysis of dimensional variation and defects.

Welding

8. Study of gas welding equipment and process. Identification of flames, making Butt joint with gas welding.
9. Study of Arc welding process, comparison of the bead geometry with DCSP, DCRP and A.C.
10. Study of resistance welding process and plot the variation of spot area with time and current variation.
11. Study of TIG welding process and plotting cooling curve in TIG welding process.
12. Study of SAW Welding process and finding out deposition efficiency of the process.
13. Study of MIG welding process and testing of weld bead formed by MIG welding.

Metal Forming

14. Evaluation of Formability of a given sheet material using Erichsen cupping test.
15. Study of Simple Die design for Blanking/Piercing operations in sheet metal forming and.
16. Manufacturing of circular blanks using a mechanical press (capacity 30 Tons) and measurement of forces and comparing with theoretical loads.
17. Study of Progressive die design and manufacturing of washer components using the same on a fly press (capacity 6 Tons) and estimation of forces.
18. Study of Compound die design and manufacturing of washer components using the same on double body fly press (capacity 8 Tons) and estimation of forces.
19. Study of Combination die design and manufacturing of cylindrical cups using the same on a Hydraulic power press (capacity 50 Tons) and estimation of drawing force.
20. Study of deep drawing die design and measuring forces with/ without blank holder for cylindrical/square cups using 10T load cell on a Hydraulic power Press and comparing them with the theoretical values.
21. Measurement of cutting force for Blanking operation using 10T load cell on Mechanical power Press for different materials and comparing theoretical and practical values.
22. Study of extrusion dies and demonstration of extruding lead material

Note: Minimum 12 Experiments need to be conducted by choosing any 4 from each section.

16EGCO3

SOFT SKILLS AND EMPLOYABILITY ENHANCEMENT LAB

Instruction	2 hours per week
Duration of Semester End Examination	2 Hours
Semester End Examination	35 Marks
CIE	15 Marks
Credits	1

Course Objectives: To help the students
1. Participate in group discussions and case studies with confidence and to make effective presentations. Also to learn the art of communication.
2. With- resume packaging, preparing and facing interviews.
3. Build an impressive personality through effective time management & goal setting, self confidence and assertiveness.
4. Understand what constitutes proper grooming and etiquette in a professional environment. Also to understand academic ethics and value systems.
5. To understand the elements of research and hone their soft skills through a live, mini project.

Course Outcomes: The students will be able to
1. Be effective communicators and participate in group discussions and case studies with confidence. Also be able to make presentations in a professional context.
2. Write resumes, prepare and face interviews confidently.
3. Be assertive and set short term and long term goals. Also learn to mange time effectively and deal with stress.
4. Make the transition smoothly from Campus to Corporate. Also use media with etiquette and know what academic ethics are.
5. To do a live, mini project by collecting and analyzing data and making oral and written presentation of the same.

Exercise 1
Group Discussion and Case studies: Dynamics of group discussion, intervention, summarizing, modulation of voice, body language, relevance, fluency and coherence.
Elements of effective presentation, Structure of presentation, Presentation tools, Body language, Creating an effective PPT.

Exercise 2
Interview Skills: Resume writing, structure and presentation, planning, defining the career objective, projecting ones strengths and skill-sets.

Interview Skills: concept and process, pre-interview planning, opening strategies, answering strategies, mock interviews.

Exercise 3
Personality Development: Effective Time Management, setting realistic goals, self confidence and assertiveness, stress management, moral values.

Exercise 4
Corporate Culture: Grooming and etiquette, communication media etiquette, Academic ethics and integrity.

Exercise 5
Mini Project: General/Technical Research, developing a questionnaire, data collection, analysis, written report and project seminar.

CIE - Continuous Internal Evaluation   SEE - Semester End Examination

AssessmentProcedures for Awarding Marks

The distribution of marks is based on CIE by concerned teacher and the Semester end examination shall be as follows:

Course (in terms of credits)	CIE	Semester end Examination(Marks)	Remarks	Duration of SemesterEnd Examination
Three(3) Credits/ Four(4) Credits	30*	70**	Theory Course/ Engg.Graphics	3 Hours
Two(2) Credits	20*	50***	Theory	2 Hours
Two(2) Credits	25	50	Lab Course/ Workshop	3 Hours
One(1) Credit	15	35	Lab Course	2 Hours
Two(2) Credits	50	—-	Project Seminar/ Seminar	——
Six(6) Credits	50	100	Project	Viva
One(1) Credit	—-	50***	Environmental Studies,Profess-ional Ethics and Human values	2 Hours
One(1) Credit	50		Mini Project	——-

CIE: Continuous Internal Evaluation

*Out of 30/20 sessional marks(CIE), 10/5 marks are allotted for slip-tests (Three slips test will be conducted, each of 10/5 marks, best two average is considered) and the remaining 20/15 marks are based on the average of two tests, weightage for each test is 20/15 marks.

**The question paper will be in two parts, Part-A and Part-B. Part A is for Ten(10) questions and is compulsory, covers the entire syllabus, and carries 20 marks. Part-B carries 50 marks and covers all the units of the syllabus (student has to answer five out of seven questions).

***The question paper will be in two parts, Part-A and Part-B. Part A is for Ten(10) questions and is compulsory, covers the entire syllabus, and carries 15 marks. Part-B carries 35 marks and covers all the units of the syllabus (student has to answer five out of seven questions).

Note: A course that has CIE (sessional marks) but no semester end examination as per scheme, is treated as Pass/Fail for which pass marks are 50% of CIE.

A candidate has earned the credits of a particular course, if he/she secures not less than the minimum marks/grade as prescribed. Minimum pass marks for theory course is 40% of total marks i.e., CIE plus semester end examinations where as for the lab course/project is 50%.

16ME C11

PRIME MOVERS AND PUMPS

Instruction	3 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	70 Marks
CIE	30 Marks
Credits	3

Course Objectives:
Student will understand
1. Various equations related to energy head and loss of head due to friction.
2. Working principles of hydraulic turbines.
3. Working principle of various types of boilers.
4. Working principle of various types of steam turbines and gas turbines.
5. Working principle of reciprocating pumps.
6. Working principle of centrifugal pumps.

Course Outcomes: On successful completion of this course the student will be able to
1. Estimate the loss of head due to friction.
2. Determine power developed by different types of the hydraulic turbines.
3. Differentiate fire tube boilers from water tube boilers.
4. Estimate power developed by different types of the steam turbines and gas turbines.
5. Evaluate the power required by reciprocating pumps.
6. Determine the power required by centrifugal pumps.

.
UNIT – I
Fluid Mechanics: Types of fluid flows, Reynolds number and its significance, Bernoulli's equation and its applications, flow through pipes, friction losses in pipes, Darcy equation - simple problems.

UNIT – II
Hydraulic Turbines: Classification, working of Pelton, Francis and Kaplan turbines, velocity triangles, power and efficiencies, specific speed, unit testing and model testing of turbines - simple problems.

UNIT – III
Generation of steam: Formation and properties of steam, Dryness fraction, functions of boilers, working of Lancashire boiler, Locomotive boiler, Babcock and Wilcox boiler, boiler mountings and accessories.

UNIT – IV

Steam turbines: Classification, velocity triangles, power and thermal efficiencies of impulse and reaction turbines - simple problems.

Gas turbines: Net workdone and Thermal efficiency of gas turbine cycle (without and with friction), optimum pressure ratio for maximum power and maximum efficiency - simple problems.

UNIT–V

Reciprocating Pumps: Single and double acting pumps, power and efficiency, Indicator diagrams, effect of acceleration and friction, safe speed to avoid cavitation, air vessels - simple problems.

Centrifugal pumps: Classification and working, priming, velocity triangles, power and efficiencies, pressure rise, minimum starting speed, specific speed and model testing of pumps - simple problems.

Text Books:
1. R.K.Rajput, Thermal Engineering, Laxmi Publications (P) Ltd, 8th edition, 2011.
2. P.L. Ballaney, Thermal Engineering , Khanna Pub., 20th Edition, 2004.
3. P.N.Modi and S.M.Seth, Hydraulics and Fluid Mechanics including Hydraulic machines, Standard Book House, 18th edition, 2011.

Suggested Reading:
1. Mahesh M Rathor, Thermal Engineering, Tata Mc.Graw-Hill Publishers 2013.
2. D.S.Kumar,Thermal Science and Engineering ,S.K.Kataria and Sons, 2009 Engineering.
3. Jagdish Lal, Hydraulics and Fluid mechanics, Metropolitan Book Co. Pvt. Ltd., 2004.

16ME C12

PRIME MOVERS AND PUMPS LAB

Instruction	3 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	50 Marks
CIE	25 Marks
Credits	2

Course Objectives: Student will understand
1. Application of the equation in measuring discharge of fluid.
2. The verification of energy head at various points in the stream.
3. The application of Darcy equation for flow through pipes.
4. Working principles of Pelton, Francis and Kaplan turbines.
5. Working principles of various types of pumps.
6. The working principle of internal combustion engines.

Course Outcomes: On successful completion of this course the student will be able to
1. Determine the principle of measurement of discharge of fluid.
2. Determine the direction of flow of fluid in a pipe.
3. Determine loss of head due to friction.
4. Estimate the power developed by Pelton, Francis and Kaplan turbines.
5. Determine the power required by various types of pumps.
6. Evaluate the performance of internal combustion engines.

List of Experiments:
1. Measurement of discharge by venturimeter.
2. Verification of Bernoulli's equation.
3. Determination of Darcy's friction factor and nature of water flow through pipes.
4. Performance and characteristic curves of Pelton turbine.
5. Performance and characteristic curves of Francis Turbine under constant speed and variable Speed conditions.
6. Performance and characteristic curves of Kaplan turbine under constant speed and variable speed conditions.
7. Performance characteristics of reciprocating pump.
8. Performance characteristics of centrifugal pump.
9. Performance characteristics of Self priming pump.
10. Performance characteristics of Gear pump.
11. Performance test on Single cylinder diesel engin.
12. Performance test on multi cylinder petrol engine.

Note: Any 10 experiments need to be conducted.

16ME C13
MECHANICAL ENGINEERING LAB

Instruction	3 Hours per week
Duration of Semester End Examination	3 Hours
Semester End Examination	25 Marks
CIE	13 Marks
Credits	1

Course Objectives: Student will be able to
1. Acquire knowledge in evaluating material characterization and the performance of I.C. Engines.
2. Demonstrate this knowledge in tuning of simple components.
3. Distinguish between various manufacturing processes.

Course Outcomes: students are able to
1. Evaluate the properties of material by tensile testing and performance of diesel engine.
2. Produce the parts by simple turning process.
3. Understand the concepts of welding, casting (moulding) process.

List of Experiments:
1. To characterize the material by simple tensile testing using UTM.
2. To conduct performance test on four-Stroke single cylinder Diesel Engine.
3. Practice on simple turning on Lathe machine.
4. Moulding practice for simple patterns.
5. Making a straight bead with arc welding.

   Note : Any 4 Experiments need to be conducted.
